Gov't bans wild, exotic birds as pets

By Christian V. Esguerra

THE GOVERNMENT HAS BANNED THE IMPORTATION of wild or exotic birds as pets from 11 Asian countries affected by avian influenza even as it braces for the threat of contamination from migratory birds during the four or so months of cold weather in the Philippines.

Environment Secretary Michael Defensor said he has suspended the issuance of wildlife import permits for all "caged and pet wild birds, including their by-products and derivatives originating from countries where the avian influenza has been recorded."

The ban covers birds coming from Cambodia, China, Hong Kong, Japan, Laos, Indonesia, Pakistan, South Korea, Thailand, Taiwan and Vietnam.

Defensor said the suspension also covered previously issued permits. He said the Department of Environment and Natural Resources usually issues 30 such permits a month to importers of exotic birds, which come mostly from Indonesia, Malaysia and Thailand.

The ban will stay until the authorities feel confident that the country was no longer under threat of being infected by the avian flu virus.

Negative for bird flu

"As of now, the country is negative of avian flu. We have no problem with birds already in the country," said Environment Undersecretary Amado de Castro.

Defensor ordered monitoring teams to be vigilant in preventing the entry of wild birds from countries afflicted with the deadly H5N1 strain of bird flu which has killed 65 people in four Asian countries since late 2003 and has been reported in Russia and Europe.

The DENR is particularly wary of birds imported from Indonesia, the latest country to have reported bird flu cases, and entering the country through the ports of General Santos, Davao and Zamboanga City.

Defensor also asked the public to refrain from buying birds from the black market, saying they risked bringing avian flu into the country through such transactions.

Earlier this week, the agriculture department ordered tighter surveillance of the illegal trading of exotic birds in Mindanao, and their immediate destruction if they came from bird-flu affected countries.

Another risk factor is the seasonal migration of birds seeking temporary shelter in tropical countries like the Philippines during the cold months of October to February.

'Major flyway'

The DENR said it was closely watching such "major flyways" as the Olango island in Cebu, the Candaba swamp in Pampanga, the Agusan marsh, the Manila Bay and some 55 other wetlands areas around the country.

The World Health Organization earlier warned that migratory birds carrying avian flu might contaminate domestic birds and poultry which would in turn infect humans.

According to Dr. Mundita Lim of the Protected Areas and Wildlife Bureau, migratory birds usually come from China, South Korea and Japan which have reported bird flu cases.

She said among these were wild ducks, plovers, terns and herons.

Officials have asked local governments to keep people and poultry away from migratory birds.

Asked how authorities intended to tackle the problem of migratory birds, Defensor said it would be done primarily through surveillance.

"The birds don't just stray anywhere, they go to wetland areas," he said.

"We will make sure that these birds will be properly dealt with. I will not go into the details of how they will be killed or caught. But that we have to do...because other birds will be affected," he said.

No-show for Erap witnesses

By Nelson F. Flores

LAWYERS OF JAILED EX-PRESIDENT ESTRADA yesterday expressed apprehension that defense witnesses were being pressured not to testify for their client by "people with interest" in the plunder trial of the deposed leader at the Sandiganbayan.

Defense counsel Rene Saguisag expressed these fears to the three-member Special Division after a defense witness failed to appear at yesterday's hearing.

He said family members of the witness, said to be a close Estrada confidante, had persuaded the witness not to testify in Estrada's behalf.

The Special Division earlier asked the defense panel to give the court and the prosecution panel a list of their potential witnesses.

'People with interest'

Saguisag explained that an advanced list of witnesses could be used by "people with interest" to prevent them from testifying.

He said the presentation of witnesses was part of the defendant's right to due process and equal protection of the law.

Asked by reporters who the "people with interest" were, Saguisag said it could be anyone who would gain from hiding the truth about the charges against Estrada.

Saguisag said he was still conferring with other members of the defense team to decide which witnesses' names to submit to the court.

Special Prosecutor Dennis Villa-Ignacio earlier complained that the failure of the defense panel to provide the prosecution with a list of defense witnesses was a scheme to make it difficult for prosecutors to question the witnesses, a charge which the defense panel denied.

Defense lawyer Jose Flaminiano said the defense still has to call some 10 to 15 witnesses, including Philippine Star columnist Marichu Villanueva, the seventh journalist to take the witness stand.

"We will surely top the 71 witnesses presented by the prosecution panel," Flaminiano said.

He said the defense was finding it difficult to convince some witnesses to testify for Estrada. Others have refused and have filed motions to quash the subpoenas issued by the court for their appearance.

Different excuses

Of the five witnesses subpoenaed by the defense panel for yesterday's hearing, not a single one showed up. They cited excuses ranging from previous commitments to being out of the country.

One witness, Rosalinda Ng of the PCI-Equitable Bank, was excused by the defense panel after it was learned from her lawyer that she had no personal knowledge of the information being sought.

This prompted Villa-Ignacio to comment that the defense panel "is only going through the motion of calling witnesses when they actually do not have any."

Flaminiano warned Villa-Ignacio against "belittling the defense witnesses." He said contrary to Villa-Ignacio's claim, there are no insignificant witnesses or evidence.

"The little circumstances betray the probability of positive testimony and lend probability to another. These little things grouped together create probabilities and the probabilities give color and character to the whole evidence. Most trials are a battle of probabilities. The advocate can expect to obtain only the probable truth," he said.

Keep dreaming.

Martial Law?

I hope the government will not resort to martial law. It is a last resort and should be used only in the most extreme cases.

DISPOSAL

The government should take steps to dispose of the surplus properties of the government. This will help to reduce the national debt and improve the economy.

The government should also take steps to improve the education system. This will help to produce a more skilled workforce and improve the standard of living.

The government should also take steps to improve the health care system. This will help to reduce the incidence of disease and improve the overall health of the population.

The government should also take steps to improve the transportation system. This will help to reduce travel time and improve the efficiency of the economy.

The government should also take steps to improve the housing system. This will help to provide better living conditions for the population and improve the standard of living.

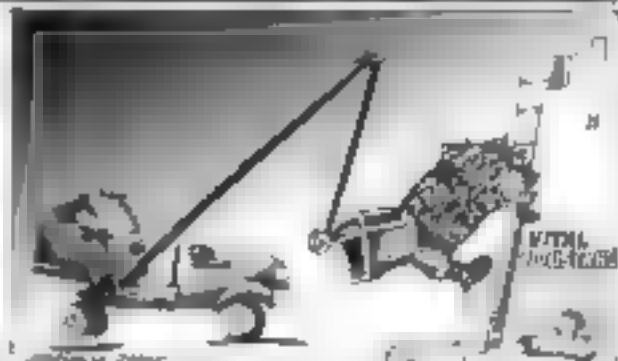

The government should also take steps to improve the environment. This will help to protect the natural resources and improve the quality of life.

The government should also take steps to improve the social services. This will help to provide better support for the vulnerable members of society and improve the overall well-being of the population.

The government should also take steps to improve the justice system. This will help to ensure that the law is enforced and that the rights of the citizens are protected.

The government should also take steps to improve the foreign relations. This will help to build stronger ties with other countries and improve the international standing of the Philippines.

The government should also take steps to improve the national security. This will help to protect the country from external threats and ensure the safety of the citizens.

Rebels launch 7 simultaneous attacks vs gov't

MANILA (AP) — Rebel forces launched seven simultaneous attacks against government military bases in the Philippines on Wednesday, claiming to have killed 10 soldiers and captured 100 weapons.

The attacks were part of a coordinated effort by the New People's Army (NPA) to disrupt government operations and gain control over more territory in the southern Philippines.

The NPA claimed to have captured 100 weapons, including rifles, machine guns, and explosives, during the attacks. They also claimed to have killed 10 soldiers and wounded several others.

The attacks took place in various locations across the southern Philippines, including Mindanao and Luzon. The government military forces were caught off guard by the simultaneous nature of the attacks.

The NPA is a Marxist-Leninist organization that has been active in the Philippines since the 1960s. It is considered a terrorist organization by the United States and other countries.

RAIDERS MAKE 'NET PROVIDERS LOOK TO OTHER SOFTWARE

By [Name] [Location]

Internet service providers (ISPs) are looking for new ways to protect their networks from hackers and other malicious users. One of the most common methods is to use firewalls, which act as a barrier between the internal network and the outside world.

However, firewalls are not always effective, and hackers can find ways to bypass them. This has led to the development of new software, such as intrusion detection systems (IDS) and intrusion prevention systems (IPS), which can monitor network traffic and detect suspicious activity.

ISPs are also looking for ways to protect their users' data and privacy. One of the most common methods is to use encryption, which converts data into a code that can only be read by the intended recipient.

Another method is to use virtual private networks (VPNs), which allow users to connect to a secure network over the Internet. ISPs are also looking for ways to protect their users' identities, such as by using anonymous web browsing services.

E-waste problem looms, says Greenpeace

By John H. Johnson
 Manila, Philippines — As the world's population grows, the amount of electronic waste (e-waste) is also growing. Greenpeace Philippines says that the country is one of the top 10 e-waste generators in the world, with an estimated 1.5 million kilograms of e-waste generated annually. The group says that the e-waste problem is growing rapidly, and that the government and the private sector must take action to address the problem.

Figure 1 illustrates the experimental setup for measuring the time delay of a quantum state. The diagram shows a sequence of operations: an input state $|\psi\rangle$, followed by a Hadamard gate (H), a phase shift gate (ϕ), and a final Hadamard gate (H). The output is measured, and the results are compared to a reference state $|\psi\rangle$.

This image shows a page from a handwritten manuscript, likely a musical score. The page is filled with staves of musical notation, including notes, rests, and clefs. The text is written in a historical script, possibly a form of Arabic or Persian, and is arranged in columns alongside the musical staves. The handwriting is dense and characteristic of the period. The page is numbered '1' in the top right corner.

DOF loses hope on VAT implementation this year

Collection seen hitting only PSB

By David H. Lawrence

Figure 1 is a 3D bar chart illustrating the distribution of the number of children per woman by country (USA, Mexico, India) and sex (Male, Female). The Y-axis represents the number of children (0 to 10). The X-axis represents the country (USA, Mexico, India). The Z-axis represents the sex (Male, Female). The chart shows that the distribution of children per woman is generally higher for females than for males, and that the distribution is more skewed towards higher numbers of children in India compared to the USA and Mexico.

1. **Background:** The *Journal of the American Medical Association* (JAMA) is a leading medical journal. It is published weekly and is one of the most influential medical journals in the world. It is published by the American Medical Association (AMA).

USPI completes machine repair

By Edward M. Reardon

Figure 1 consists of two line graphs, (a) and (b), showing the effect of temperature on the growth of *E. coli*.

Graph (a) shows the growth rate (h⁻¹) on the y-axis (ranging from 0 to 1.0) versus temperature (°C) on the x-axis (ranging from 10 to 40). Two lines are plotted: a solid line for the control and a dashed line for the mutant. Both lines show a similar trend, with growth rate increasing from approximately 0.2 at 10°C to a peak of about 0.8 at 30°C, and then decreasing to about 0.4 at 40°C. The control line is slightly higher than the mutant line at most temperatures.

Graph (b) shows the growth rate (h⁻¹) on the y-axis (ranging from 0 to 1.0) versus temperature (°C) on the x-axis (ranging from 10 to 40). Two lines are plotted: a solid line for the control and a dashed line for the mutant. The control line shows a peak growth rate of about 0.8 at 30°C. The mutant line shows a much lower growth rate, peaking at about 0.2 at 30°C. The mutant line is consistently lower than the control line across the entire temperature range.

Figure 1 consists of four grayscale images arranged in a 2x2 grid. The top row shows the original handwritten digit '4' images. The bottom row shows the same images with a 10% contrast reduction. The left column shows the original and reduced contrast versions of the same image, while the right column shows the original image on the left and its reduced contrast version on the right.

84 Honey, my honey,

Much of the research on the effects of the environment on human health has focused on the physical environment, such as air and water pollution, noise, and the built environment. However, the social environment, which includes the social structures and processes that shape human behavior, is also a critical determinant of health. This article reviews the literature on the social environment and health, focusing on the role of social support, social capital, and social networks in promoting health and well-being. The article discusses the theoretical and empirical evidence for the health benefits of these social factors and provides practical recommendations for interventions to improve the social environment.

Lola Cecilia's Suman sa Lihiya

By Rose Rodriguez-Cano

DECEMBER is just around the corner, signaling only months for all sorts of fun in the month of my birth. I usually spend my birth month at the office, ready to be called in the nightstand. I promise you it won't be too bad, really prepared.

Preparation is what you should do for December. It's not a bad idea to have a plan for the month of my birth. I usually spend my birth month at the office, ready to be called in the nightstand. I promise you it won't be too bad, really prepared.

the authors' conclusions. It is worth noting that the authors also found that the use of the word "and" in the title of the study was associated with a higher number of citations than the use of the word "or". This finding is consistent with the idea that the use of the word "and" suggests a more comprehensive or inclusive study, which may be more appealing to researchers.

⁴² For an in-depth analysis of the role of the state in the development of the welfare state, see Esping-Andersen (1990).

1. In each of the following cases, the first number is the number of people who have the disease, and the second number is the number of people who do not have the disease.
